*A Brief Introduction to*

# FLUID MECHANICS

| 4th Edition |

# Contents

## 1 *INTRODUCTION*

1.1	Some Characteristics of Fluids	2
1.2	Dimensions, Dimensional Homogeneity, and Units	2
1.2.1	Systems of Units	5
1.3	Analysis of Fluid Behavior	7
1.4	Measures of Fluid Mass and Weight	8
1.4.1	Density	8
1.4.2	Specific Weight	8
1.4.3	Specific Gravity	9
1.5	Ideal Gas Law	9
1.6	Viscosity	11
1.7	Compressibility of Fluids	15
1.7.1	Bulk Modulus	15
1.7.2	Compression and Expansion of Gases	16
1.7.3	Speed of Sound	17
1.8	Vapor Pressure	18
1.9	Surface Tension	18
1.10	Chapter Summary and Study Guide Problems	21

## 2 *FLUID STATICS*

1	2	28
2.1	Pressure at a Point	29
2.2	Basic Equation for Pressure Field	30
2.3	Pressure Variation in a Fluid at Rest	31
2.3.1	Incompressible Fluid	32
2.3.2	Compressible Fluid	34
2.4	Standard Atmosphere	35
2.5	Measurement of Pressure	35
2.6	Manometry	37
2.6.1	Piezometer Tube	37
2.6.2	U-Tube Manometer	38
2.6.3	Inclined-Tube Manometer	41
2.7	Mechanical and Electronic Pressure Measuring Devices	42
2.8	Hydrostatic Force on a Plane Surface	43
2.9	Pressure Prism	47
2.10	Hydrostatic Force on a Curved Surface	49
2.11	Buoyancy, Flotation, and Stability	52
2.11.1	Archimedes' Principle	52
2.11.2	Stability	53

2.12 Pressure Variation in a Fluid with Rigid-Body Motion	55	4.5 Chapter Summary and Study Guide	118
2.13 Chapter Summary and Study Guide References	55	References	118
Problems	56	Problems	119
<b>3</b>		<b>5</b>	
<b>ELEMENTARY FLUID DYNAMICS—THE BERNOULLI EQUATION</b>		<b>FINITE CONTROL VOLUME ANALYSIS</b>	
3.1 Newton's Second Law	67	5.1 Conservation of Mass—The Continuity Equation	123
3.2 $\mathbf{F} = m\mathbf{a}$ Along a Streamline	68	5.1.1 Derivation of the Continuity Equation	123
3.3 $\mathbf{F} = m\mathbf{a}$ Normal to a Streamline	71	5.1.2 Fixed, Nondeforming Control Volume	125
3.4 Physical Interpretation	73	5.1.3 Moving, Nondeforming Control Volume	129
3.5 Static, Stagnation, Dynamic, and Total Pressure	75	5.2 Newton's Second Law—The Linear Momentum and Moment-of-Momentum Equations	130
3.6 Examples of Use of the Bernoulli Equation	78	5.2.1 Derivation of the Linear Momentum Equation	130
3.6.1 Free Jets	78	5.2.2 Application of the Linear Momentum Equation	132
3.6.2 Confined Flows	79	5.2.3 Derivation of the Moment-of-Momentum Equation	142
3.6.3 Flowrate Measurement	85	5.2.4 Application of the Moment-of-Momentum Equation	143
3.7 The Energy Line and the Hydraulic Grade Line	88	5.3 First Law of Thermodynamics—The Energy Equation	150
3.8 Restrictions on the Use of the Bernoulli Equation	90	5.3.1 Derivation of the Energy Equation	150
3.9 Chapter Summary and Study Guide Problems	91	5.3.2 Application of the Energy Equation	153
	92	5.3.3 Comparison of the Energy Equation with the Bernoulli Equation	155
		5.3.4 Application of the Energy Equation to Nonuniform Flows	160
<b>4</b>		5.4 Chapter Summary and Study Guide Problems	162
<b>FLUID KINEMATICS</b>			163
4.1 The Velocity Field	101	<b>6</b>	
4.1.1 Eulerian and Lagrangian Flow Descriptions	103	<b>DIFFERENTIAL ANALYSIS OF FLUID FLOW</b>	
4.1.2 One-, Two-, and Three-Dimensional Flows	104		
4.1.3 Steady and Unsteady Flows	104	6.1 Fluid Element Kinematics	177
4.1.4 Streamlines, Streaklines, and Pathlines	105	6.1.1 Velocity and Acceleration Fields Revisited	178
4.2 The Acceleration Field	108	6.1.2 Linear Motion and Deformation	179
4.2.1 The Material Derivative	108	6.1.3 Angular Motion and Deformation	180
4.2.2 Unsteady Effects	111	6.2 Conservation of Mass	184
4.2.3 Convective Effects	111	6.2.1 Differential Form of Continuity Equation	184
4.2.4 Streamline Coordinates	112	6.2.2 Cylindrical Polar Coordinates	186
4.3 Control Volume and System Representations	113	6.2.3 The Stream Function	187
4.4 The Reynolds Transport Theorem	114	6.3 Conservation of Linear Momentum	190
4.4.1 Derivation of the Reynolds Transport Theorem	114		
4.4.2 Selection of a Control Volume	117		

6.3.1	Description of Forces Acting on Differential Element	191	7.7	Correlation of Experimental Data	252
6.3.2	Equations of Motion	193	7.7.1	Problems with One Pi Term	252
<b>6.4</b>	<b>Inviscid Flow</b>	<b>194</b>	7.7.2	Problems with Two or More Pi Terms	253
6.4.1	Euler's Equations of Motion	194	<b>7.8</b>	<b>Modeling and Similitude</b>	<b>255</b>
6.4.2	The Bernoulli Equation	195	7.8.1	Theory of Models	256
6.4.3	Irrational Flow	197	7.8.2	Model Scales	259
6.4.4	The Bernoulli Equation for Irrational Flow	197	7.8.3	Distorted Models	260
6.4.5	The Velocity Potential	198	<b>7.9</b>	<b>Some Typical Model Studies</b>	<b>262</b>
<b>6.5</b>	<b>Some Basic, Plane Potential Flows</b>	<b>201</b>	7.9.1	Flow through Closed Conduits	262
6.5.1	Uniform Flow	203	7.9.2	Flow around Immersed Bodies	264
6.5.2	Source and Sink	203	7.9.3	Flow with a Free Surface	266
6.5.3	Vortex	205	<b>7.10</b>	<b>Chapter Summary and Study Guide References Problems</b>	<b>269</b>
6.5.4	Doublet	209			
<b>6.6</b>	<b>Superposition of Basic, Plane Potential Flows</b>	<b>211</b>			
6.6.1	Source in a Uniform Stream—Half-Body	211			
6.6.2	Flow around a Circular Cylinder	214			
<b>6.7</b>	<b>Other Aspects of Potential Flow Analysis</b>	<b>220</b>			
<b>6.8</b>	<b>Viscous Flow</b>	<b>221</b>			
6.8.1	Stress–Deformation Relationships	221	<b>8.1</b>	<b>General Characteristics of Pipe Flow</b>	<b>279</b>
6.8.2	The Navier–Stokes Equations	222	8.1.1	Laminar or Turbulent Flow	279
<b>6.9</b>	<b>Some Simple Solutions for Viscous, Incompressible Fluids</b>	<b>223</b>	8.1.2	Entrance Region and Fully Developed Flow	281
6.9.1	Steady, Laminar Flow between Fixed Parallel Plates	223	<b>8.2</b>	<b>Fully Developed Laminar Flow</b>	<b>282</b>
6.9.2	Couette Flow	226	8.2.1	From $\mathbf{F} = m\mathbf{a}$ Applied to a Fluid Element	282
6.9.3	Steady, Laminar Flow in Circular Tubes	228	8.2.2	From the Navier–Stokes Equations	286
<b>6.10</b>	<b>Other Aspects of Differential Analysis</b>	<b>230</b>	<b>8.3</b>	<b>Fully Developed Turbulent Flow</b>	<b>286</b>
<b>6.11</b>	<b>Chapter Summary and Study Guide References Problems</b>	<b>231</b>	8.3.1	Transition from Laminar to Turbulent Flow	287
			8.3.2	Turbulent Shear Stress	288
			8.3.3	Turbulent Velocity Profile	289
			<b>8.4</b>	<b>Dimensional Analysis of Pipe Flow</b>	<b>289</b>
			8.4.1	Major Losses	290
			8.4.2	Minor Losses	294
			8.4.3	Noncircular Conduits	301
			<b>8.5</b>	<b>Pipe Flow Examples</b>	<b>303</b>
			8.5.1	Single Pipes	303
			8.5.2	Multiple Pipe Systems	310
			<b>8.6</b>	<b>Pipe Flowrate Measurement</b>	<b>311</b>
			<b>8.7</b>	<b>Chapter Summary and Study Guide References Problems</b>	<b>315</b>
<b>7</b>	<b>SIMILITUDE, DIMENSIONAL ANALYSIS, AND MODELING</b>	<b>240</b>			
7.1	Dimensional Analysis	241			
7.2	Buckingham Pi Theorem	242			
7.3	Determination of Pi Terms	243			
7.4	Some Additional Comments about Dimensional Analysis	248			
7.4.1	Selection of Variables	248			
7.4.2	Determination of Reference Dimensions	249			
7.4.3	Uniqueness of Pi Terms	249			
<b>7.5</b>	<b>Determination of Pi Terms by Inspection</b>	<b>250</b>	<b>9.1</b>	<b>General External Flow Characteristics</b>	<b>327</b>
<b>7.6</b>	<b>Common Dimensionless Groups in Fluid Mechanics</b>	<b>251</b>	9.1.1	Lift and Drag Concepts	328
			9.1.2	Characteristics of Flow Past an Object	330
			<b>9.2</b>	<b>Boundary Layer Characteristics</b>	<b>333</b>
<b>8</b>	<b>VISCOUS FLOW IN PIPES</b>	<b>278</b>			
<b>9</b>	<b>FLOW OVER IMMERSED BODIES</b>	<b>326</b>			

9.2.1	Boundary Layer Structure and Thickness on a Flat Plate	333	11.4	The Centrifugal Pump	417
9.2.2	Prandtl/Blasius Boundary Layer Solution	335	11.4.1	Theoretical Considerations	417
9.2.3	Momentum Integral Boundary Layer Equation for a Flat Plate	337	11.4.2	Pump Performance Characteristics	421
9.2.4	Transition from Laminar to Turbulent Flow	340	11.4.3	System Characteristics and Pump Selection	423
9.2.5	Turbulent Boundary Layer Flow	341	11.5	Dimensionless Parameters and Similarity Laws	426
9.2.6	Effects of Pressure Gradient	343	11.5.1	Specific Speed	429
9.3	Drag	346	11.6	Axial-Flow and Mixed-Flow Pumps	430
9.3.1	Friction Drag	347	11.7	Turbines	433
9.3.2	Pressure Drag	347	11.7.1	Impulse Turbines	434
9.3.3	Drag Coefficient Data and Examples	348	11.7.2	Reaction Turbines	440
9.4	Lift	361	11.8	Compressible Flow Turbomachines	443
9.4.1	Surface Pressure Distribution	361	11.9	Chapter Summary and Study Guide References Problems	444
9.4.2	Circulation	365			445
9.5	Chapter Summary and Study Guide References Problems	367			446
		367			
		368			

## 10 OPEN-CHANNEL FLOW

376

10.1	General Characteristics of Open-Channel Flow	376
10.2	Surface Waves	377
10.2.1	Wave Speed	377
10.2.2	Froude Number Effects	379
10.3	Energy Considerations	380
10.3.1	Specific Energy	381
10.4	Uniform Depth Channel Flow	384
10.4.1	Uniform Flow Approximations	384
10.4.2	The Chezy and Manning Equations	384
10.4.3	Uniform Depth Examples	387
10.5	Gradually Varied Flow	392
10.6	Rapidly Varied Flow	392
10.6.1	The Hydraulic Jump	393
10.6.2	Sharp-Crested Weirs	397
10.6.3	Broad-Crested Weirs	399
10.6.4	Underflow Gates	402
10.7	Chapter Summary and Study Guide References Problems	403
		404
		405

## 11 TURBOMACHINES

410

11.1	Introduction	410
11.2	Basic Energy Considerations	411
11.3	Basic Angular Momentum Considerations	415

11.4	The Centrifugal Pump	417
11.4.1	Theoretical Considerations	417
11.4.2	Pump Performance Characteristics	421
11.4.3	System Characteristics and Pump Selection	423
11.5	Dimensionless Parameters and Similarity Laws	426
11.5.1	Specific Speed	429
11.6	Axial-Flow and Mixed-Flow Pumps	430
11.7	Turbines	433
11.7.1	Impulse Turbines	434
11.7.2	Reaction Turbines	440
11.8	Compressible Flow Turbomachines	443
11.9	Chapter Summary and Study Guide References Problems	444
		445
		446

## A COMPUTATIONAL FLUID DYNAMICS AND FLOWLAB

454

## B PHYSICAL PROPERTIES OF FLUIDS

469

## C PROPERTIES OF THE U.S. STANDARD ATMOSPHERE

475

## D REYNOLDS TRANSPORT THEOREM

477

D.1	General Reynolds Transport Theorem	477
D.2	General Control Volume Equations	479

## E COMPREHENSIVE TABLE OF CONVERSION FACTORS

483

## ONLINE APPENDIX LIST
